

Work Notice

The mission of DTSC is to protect California's people and environment from harmful effects of toxic substances through the restoration of contaminated resources, enforcement, regulation and pollution prevention.

Schlage Lock Field Work Beginning in February, 2015

Why this Work Notice?

The Department of Toxic Substances Control (DTSC) is sending this notice to inform the community about work at the Schlage Operable Unit (OU) and UPC OU (Site) located at 2401 and 2555 Bayshore Boulevard, San Francisco, CA 94134. Previous testing found metals in soil such as arsenic, chromium, cadmium, lead and nickel; and the volatile organic compounds (VOCs) TCE and PCE in soil and groundwater beneath the Site as a result of manufacturing activities.

What work will be done?

DTSC approved a Remedial Action Plan (RAP) on November 16, 2009 to clean up the soil and groundwater at the Site. From March 2010 through July 2011, approximately 40,000 cubic yards of soil was excavated and treated to remove VOCs. Also approximately 595,000 pounds of amendments were added to the groundwater to help in the breakdown of VOCs.

Additional grading work has been rescheduled, and will happen between **February 4, 2015 and April 30, 2015**. **This work was originally scheduled to be performed in the Fall of 2014. The work was delayed due to extended contract negotiations between the owner and contractor.** This work will include clearing, demolition, soil stock piling, and earthmoving activities. **All work will be conducted between the hours of 7:00 A.M. and 6:00 P.M., Monday through Friday.** There should be no significant disruption of traffic, dust, or other nuisances associated with this work.

How can I find out more?

This notice is being sent for informational purposes. This document and a complete record of the Site can be found at:
